Part 3

1. **Who will use the system on a daily basis?**
   Patients, receptionists, doctors, and the clinic administrator will use the system daily.
2. **What information should be stored about each doctor?**
   The system should store the doctor's name, specialty, contact details, working hours, and availability.
3. **Should patients be able to see their previous appointments?**
   Yes. Patients should be able to see their past and upcoming appointments, including whether an appointment was completed or cancelled.
4. **How long should a standard appointment last?**
   A standard appointment should last around **30 minutes**, but some services may need more time.
5. **Which events should generate notifications?**
   Notifications should be sent for upcoming appointments, cancellations, and rescheduled appointments.
6. **Are there any features you would like to add in the future?**
   In the future, the clinic may add online payments, video consultations, and electronic prescription
7. **What information about a patient should a doctor be able to see before an appointment?**
   The doctor should be able to see the patient's name, contact details, appointment details, and basic medical information relevant to the visit.
8. **Are there multiple departments or locations that need to be managed?**
   For now, the system will manage **one clinic location**. Different departments can be added in the future if needed.
9. **Can more than one doctor be involved in the same appointment?**
   Normally, one doctor will handle an appointment. The option for more than one doctor can be considered in the future.
10. **Should patients be able to search for doctors by specialty?**
    Yes. Patients should be able to search for a doctor based on their **medical specialty** and then see their available appointment times
